

Information about participating in EFOMP projects

This is a brief description of participation in projects for individual medical physicists.

EFOMP participates in projects that require knowledge from medical physicists and to show the importance of the medical physicist work in health care. EFOMP participates, for example, in steering committees or advisory boards for major European projects. This work is often, but not always, done by EFOMP officers or former officers. In projects that require extensive work, EFOMP needs support from individual medical physicists.

The basis for EFOMP participation in projects

The chairman of the project committee or another appointed EFOMP official participates in the preparation for participation in the projects and is the contact person for a project. This official comes, with support from e.g. committee members, recruiting individual medical physicists to participate in projects. This commitment is governed by an agreement between EFOMP and the individual. The EFOMP president will make the final decision, on a case-by-case basis, about who will participate.

The contract specifies what activities are to be carried out, how many hours work are required and the financial compensation for the work. The individual physicist is responsible for his or her own work. If additional travel to project meetings is required, but is not covered by the project, it can be granted in advance and compensation may be provided according to the EFOMP's internal rules.

Specific prerequisites for your participation

- Being a member of a national organization that is a member of EFOMP.
- Having references to your experience as a project member.
- Being very interested in the subject
- Your skills matching the skills needed.
- Being willing to collaborate and communicate with others during the project.
- Having investigated that you have the time to perform the tasks.

(Note that the contract is signed as an individual, but it may be checked with your employer.)
